Borrow & Lend

Explore Flow

“OpenBooks” is a design concept for a local book-sharing platform that redefines how communities access and **enjoy** literature. We moved away from the high costs of traditional retail, focusing instead on accessibility, community **trust**, and meaningful connections. The **primary goal** was to transform the process of finding a new book from a financial hurdle into a seamless, **rewarding** experience that brings neighbors together through a **shared love** for reading.

A UNIFIED VIEW OF YOUR LOCAL LIBRARY

The design philosophy of the Home screen is to create a powerful, localized ecosystem on a single, easy-to-read surface. By integrating personal profile details directly above the neighborhood feed, we build instant community trust.

My Books (238): A clear, motivating count of the books the user (like Donald Turgeon) is actively lending to the community. This represents a user's local contribution and potential to earn income by decluttering their shelves.

Borrowing Books (74): A real-time tracker for the user's own active borrowing, encouraging sustainable consumption and shared resources.
